1. Purpose

The document illustrates the steps to be performed by the YES BANK Partner or customer to subscribe for an API using Advanced Developer Portal.

2. Portal Login

EDP UAT - https://uatapiportal.yesbank.in/

3. Steps to get Access to YES Bank API

On Request YES BANK team will Register and create online Account.

Login with Registered user details on API Portal

Create your application with registered Account

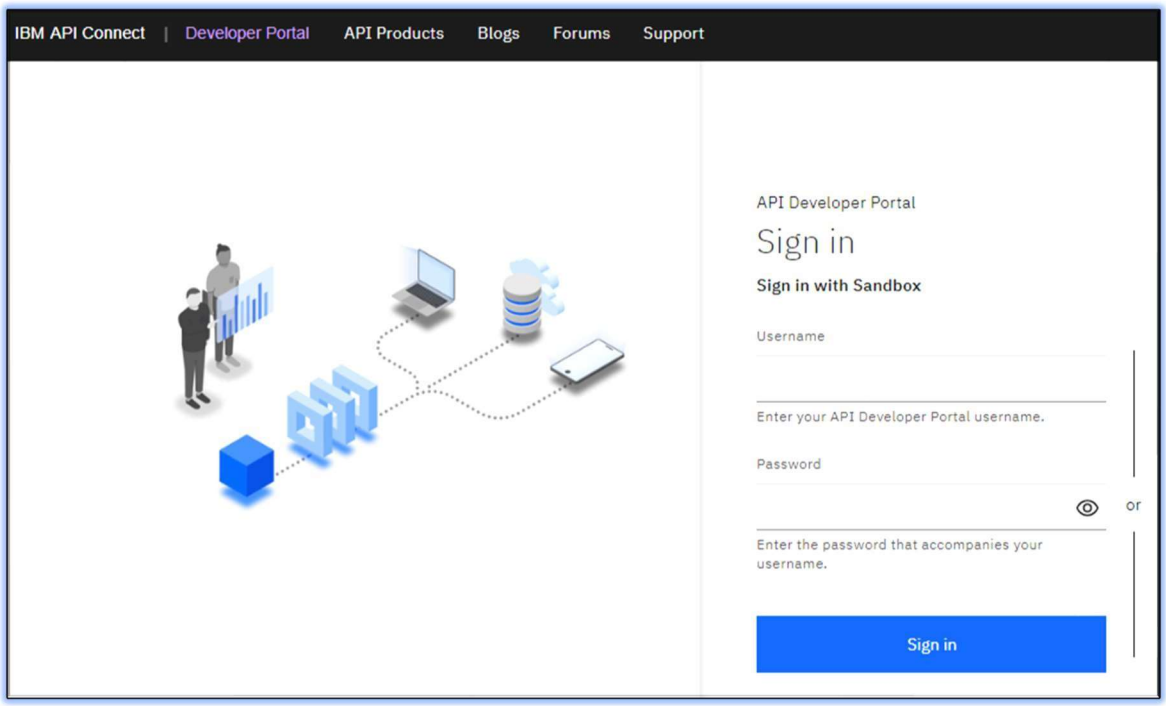

Subscribe to required API

4. Prerequisite

As most of the API planned currently is targeted towards specific partners or customers, YES BANK would invite each partner/customer organization adding them into API Manager against the owner email ID using the API Manager User Interface.

- E-mail ID for Subscription (Gmail E-mail ID will not be accepted, for subscription. E-mail ID should have Organization domain name)
- Should have Consumer Organization Name.
- CA certified SSL certificate should be mandatorily available Public IP should be available

5. For Registered Users - LOGIN

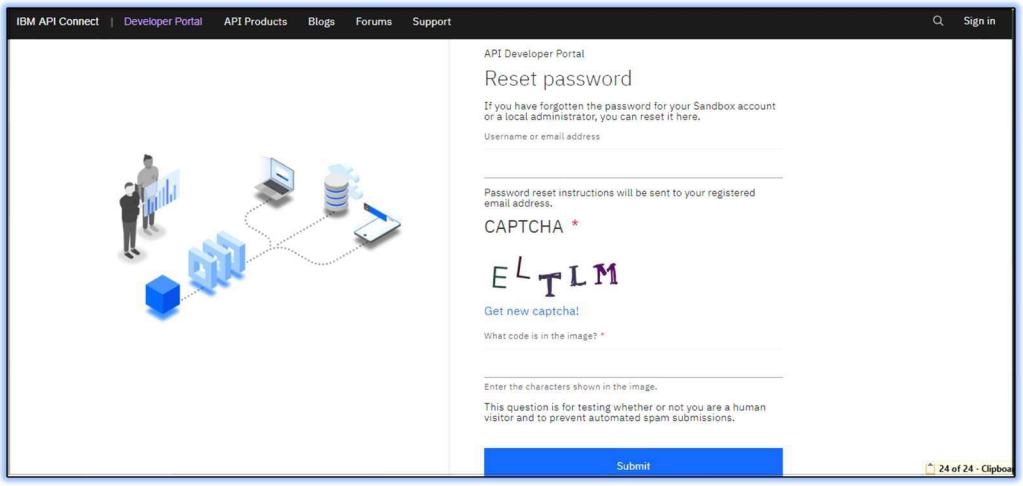

- Enter Portal link to login
- Enter 'Email ID' in Username which was shared for Registration
- Enter password which accompanies your username in Password field. [If forgot Password Please check Forgot Password Guideline].
- Click on Sign in

6. Forgot Password for registered users

For registered users, we can request new password if misplaced or forgot password.

1. Press link given at bottom of the sign in page “Forgot Password?”

2. You will be directed to Reset Password Page

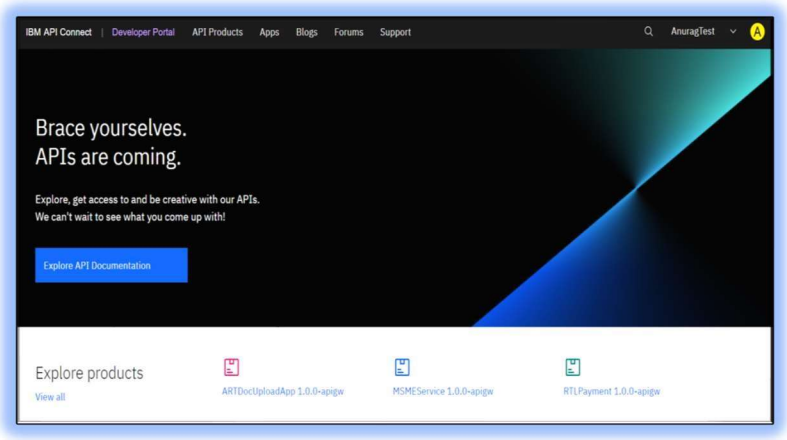

3. Enter ‘Email id’ in Username or e-mail address
4. Enter characters given in CAPTCHA
5. Click on “SUBMIT”
6. An email will be sent to your registered email id. Click this link/paste link in Chrome and enter a new password.

7. Create Application

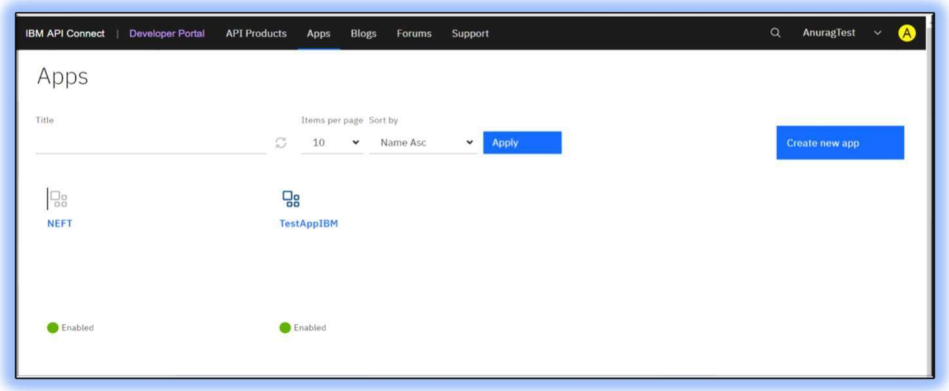

To subscribe any API, User will have to create Application first.

Below are the steps:

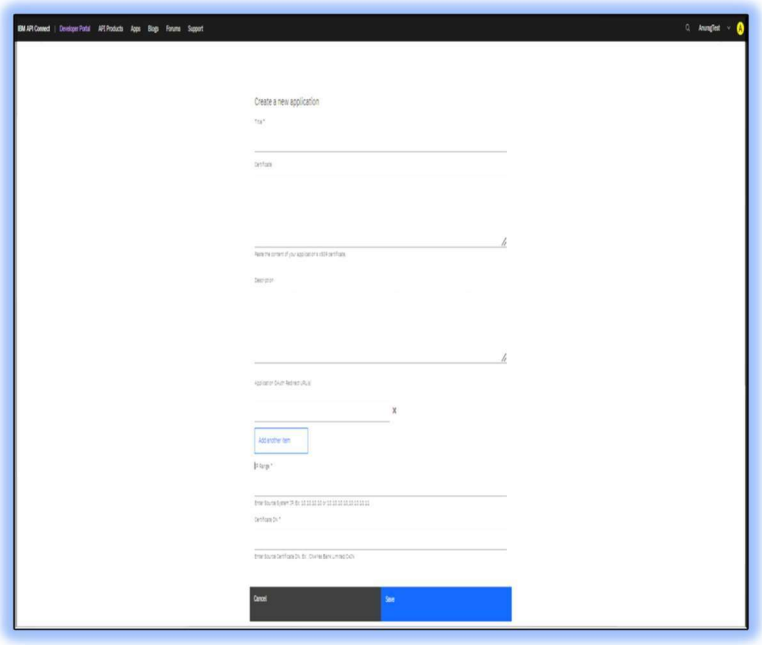

i. To create a new application, click on APPS.

ii. Click 'Create NEW APP'.

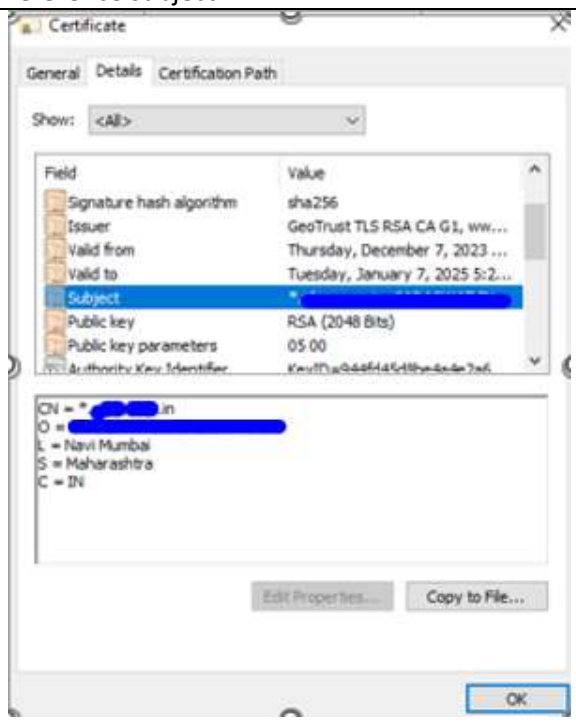

iii. User will be directed to Create New Application Page.

Please provide appropriate details on 'register application' page as follows:

- Title: - App name should be Alpha only and min 5 Digits and max 25 length)
- Description: - The description of the App would help Yes Bank understand the usage of the App.
- IP Range: - Enter Source System IP. Ex: 10.10.10.10;10.10.10.10;10.10.10.11
- (Ip's are sperated by ";")
- Certificate DN: - Enter Source Certificate DN. Eg: /CN=Yes Bank Limited/C=IN

If the certificate is of the following format:

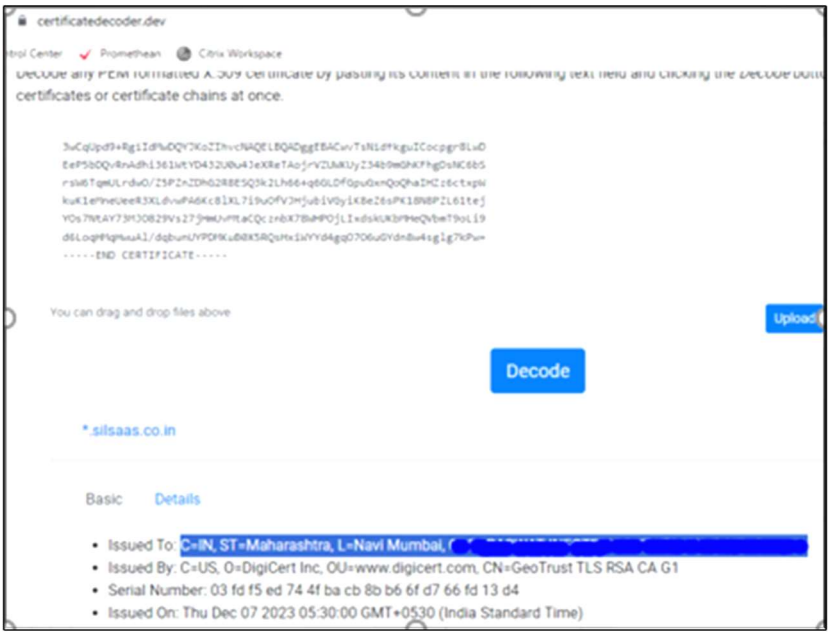

Reference subject DN	Certificate path should CA signed full chain certificate.
	

CN = *.********.co.in
O = xxxxxxxxxxxxxxxxx PVT LTD
L = Navi Mumbai
S = Maharashtra
C = IN

In case SSL displays like above User can use the following online editor by uploading the certificate in .crt format to extract the certificate subject.

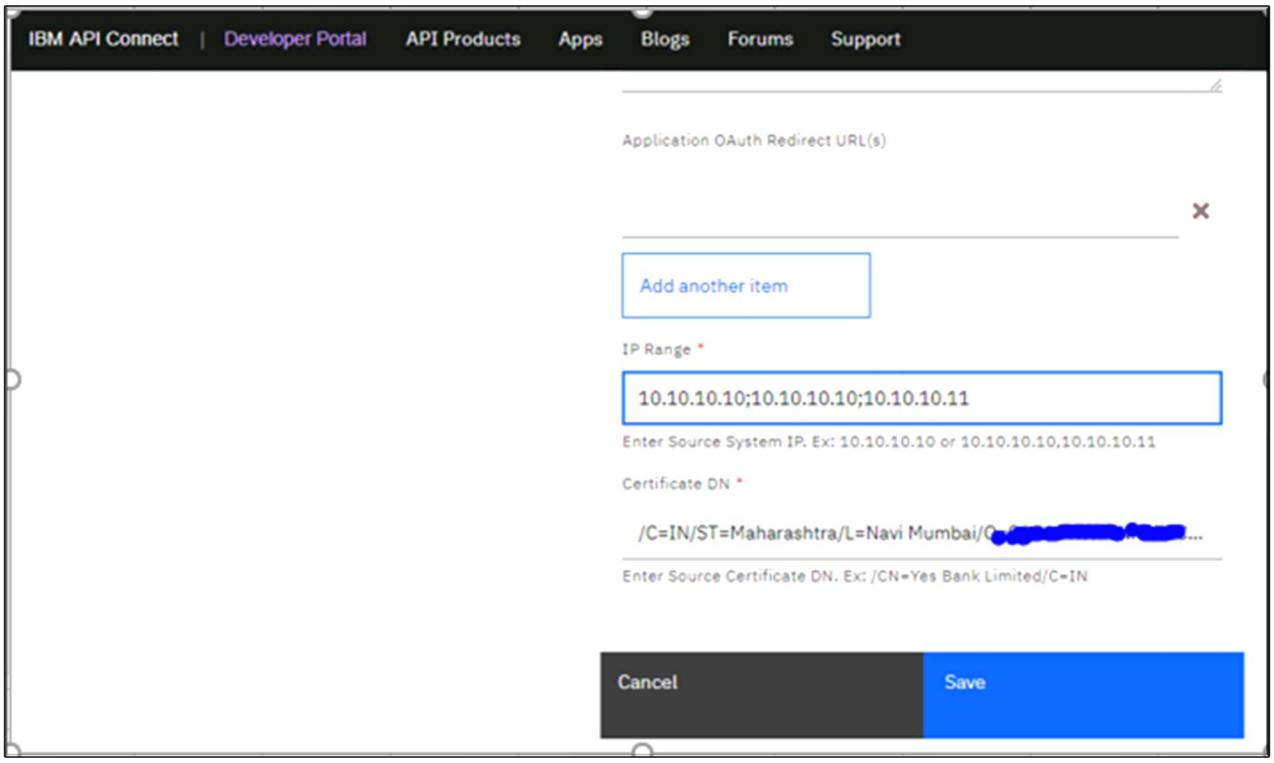

https://certificatedecoder.dev/

•Extract the Issued to field and convert it to the following format:

1)Kindly replace the whitespace and commas with forward slash('/'). After making the needful changes the subject should look like this:
/C=IN/ST=Maharashtra/L=Navi Mumbai/*=xxxxxxxxxxxxxxxxx/CN=*.xxxxxxxxxxx.co.in

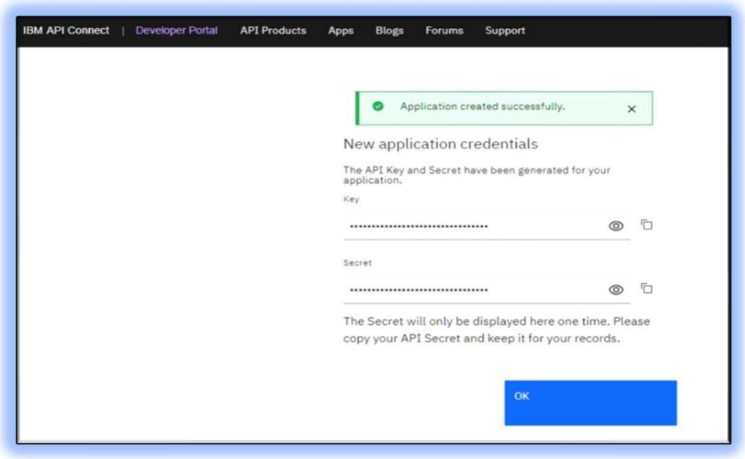

After making the needful changes, kindly upload the subject in certificate subject field.

- Click on Save. Below screen will be displayed.

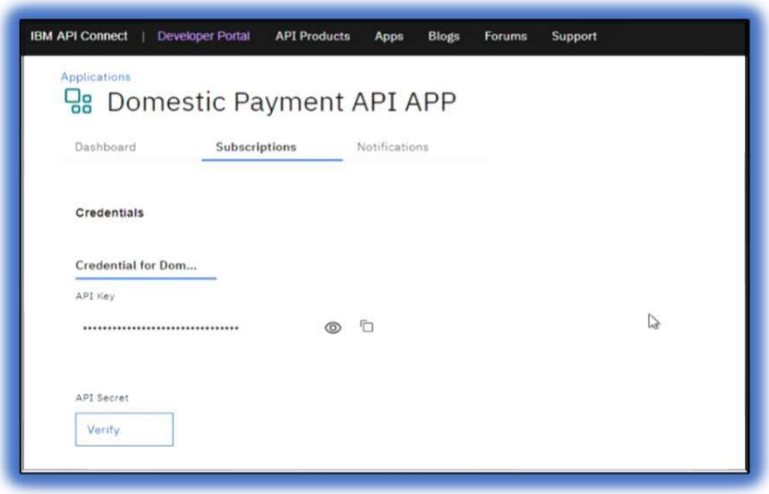

- iv. Post Saving Client ID and Client Secret will be displayed.

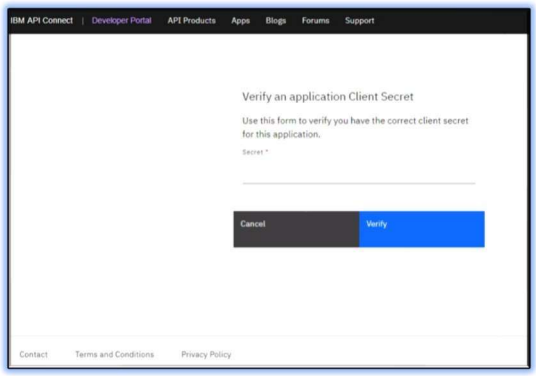

v. Copy the client ID and Client Secret.

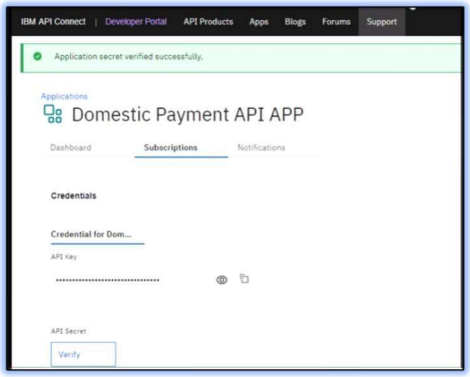

**Note ** Client Secret will be displayed once. User will not be able to view client secret once moved to next page. Hence please copy client id and client secret.

vi. To ensure client secret has been copied correctly please click on “Verify”

vii. Enter Client Secret at below screen and Press Verify. A confirmation message will be displayed as below.

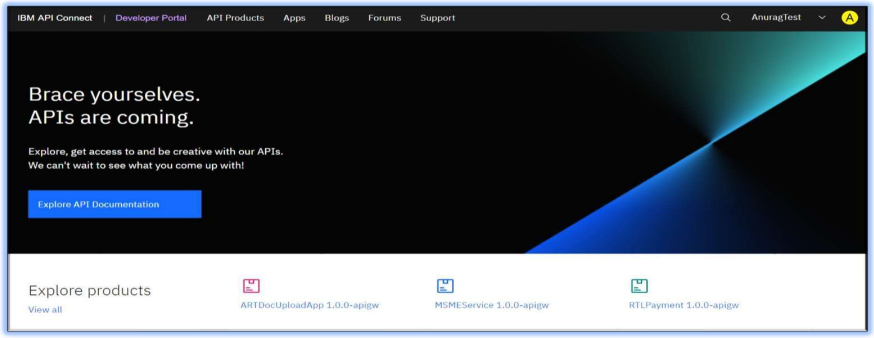

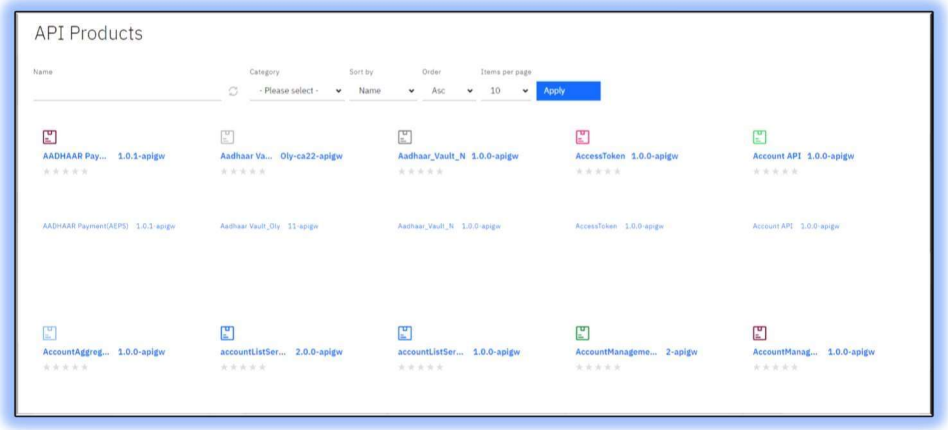

viii. The newly created APP will appear under ‘APPS’ tab .

8. Subscribe to required API

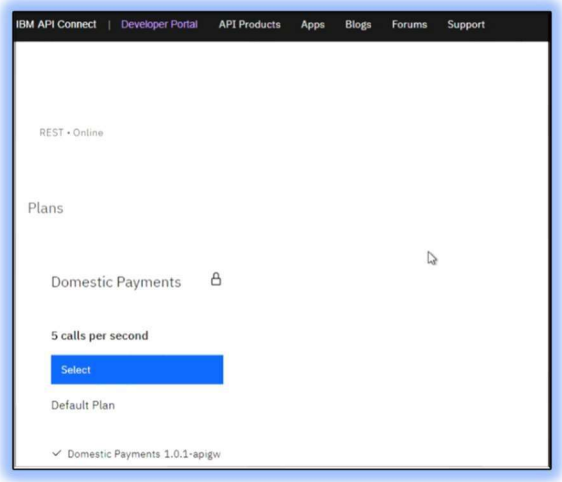

- After successful creation of APP user can go to homepage and click on API Products.

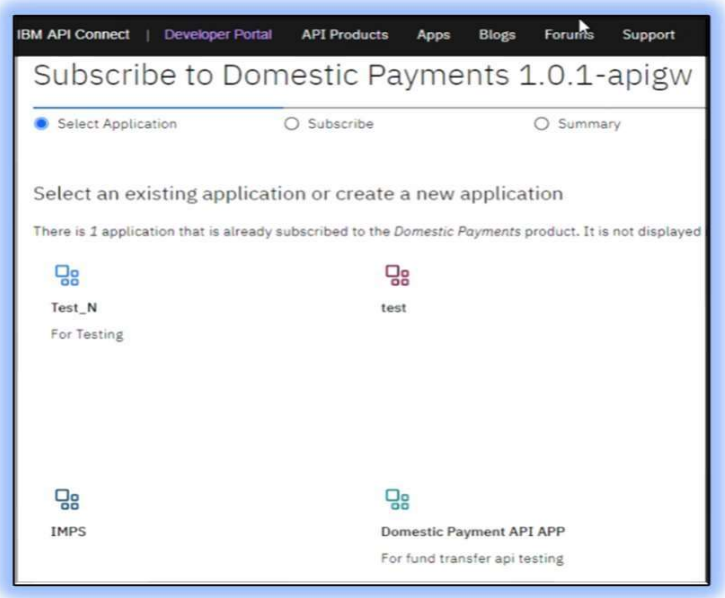

- User can explore various API Products available for subscription and select any required product out of the list and select the Plan.

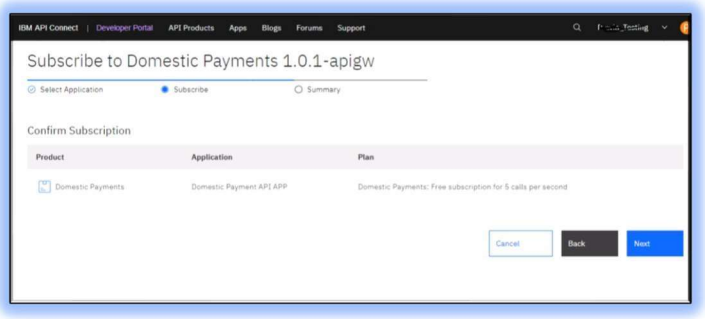

Once API is selected, Page will be directed to required API Page. Please click on “select” requested API Plan.

- Select desired APP by clicking radio button.

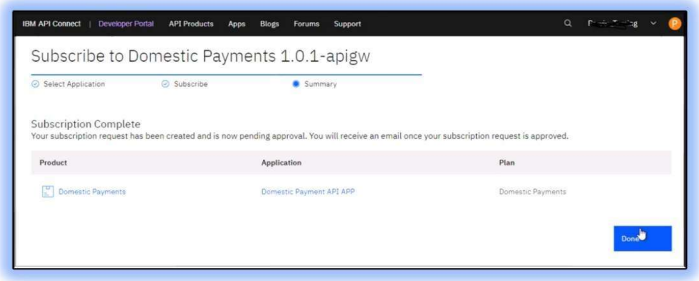

- Page will be directed to confirm Subscription.

On clicking “Next” Summary of API product and Application will be displayed with a message Subscription Complete.

- Click on “Done” to proceed.

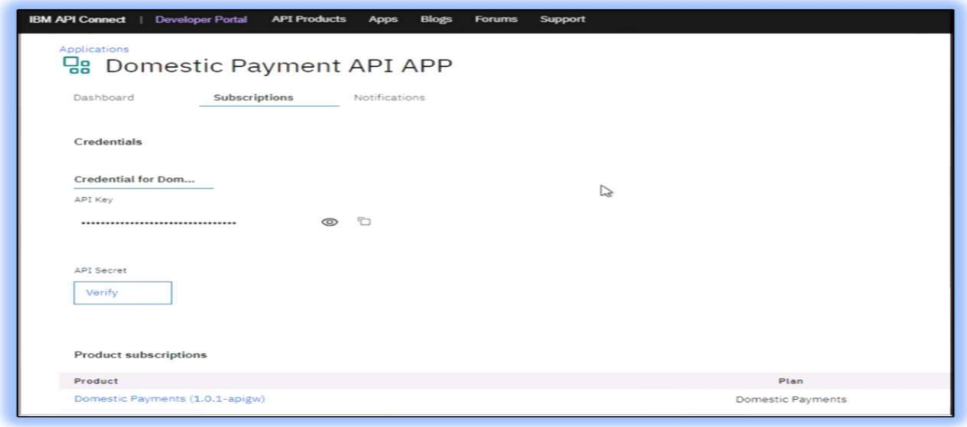

- Automatic subscription approval intimation goes to Yes Bank Data Power team for approve/reject the subscription request.

- Post the request is approved user will be intimated on approval status as below.

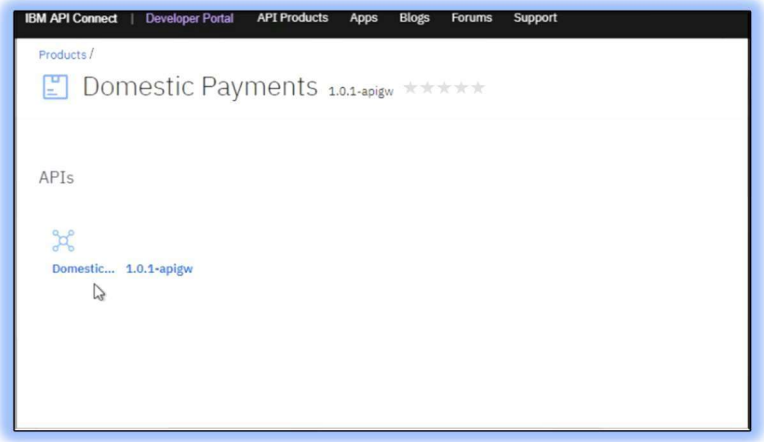

API plans, subscribed by user, will appear under respective APP that user have created.

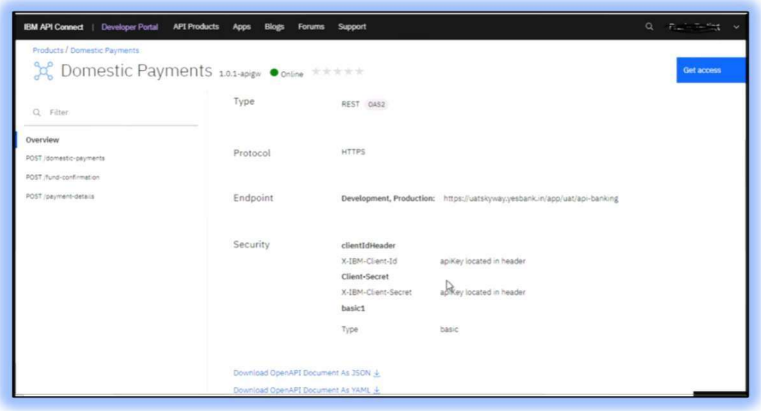

9. URL and Swagger details

- To access API, URL will be available on portal with API request response details.
- User can click on API Products > Click on API

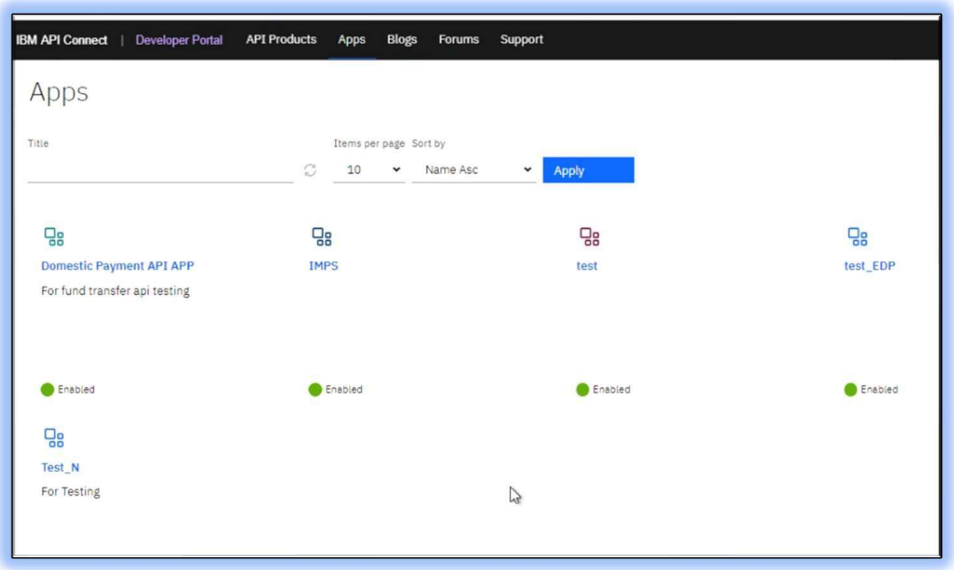

- Page will be displayed with URL and other Swagger details.

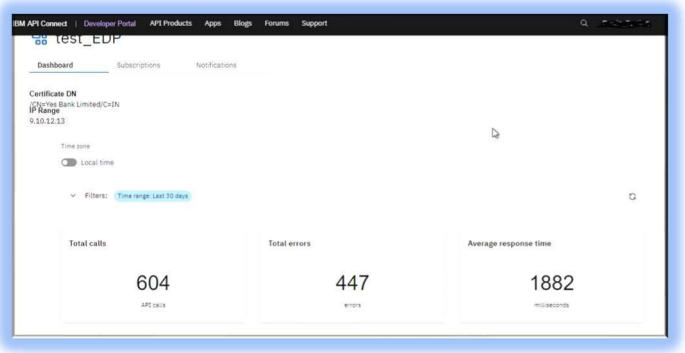

- User can download required format and test API via SOAP UI or POSTMAN tool using the appropriate client_ID, client_secret credentials to access the API.

10. Dashboard

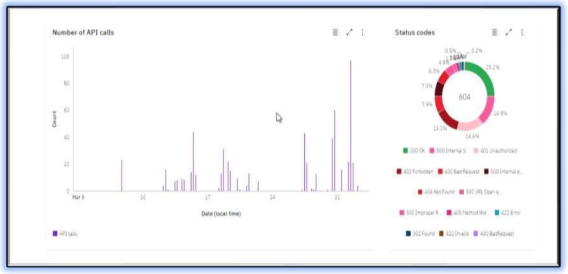

- To view API call details, user can go to APPS and click on respective APP.

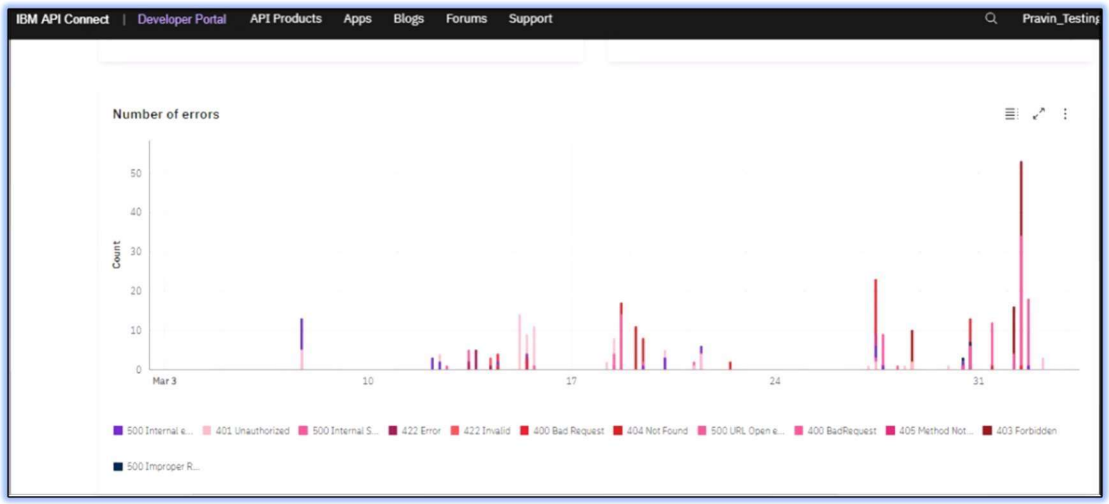

- Page will direct you to Dashboard which will give details of API subscribed via that Application.
    - Total No of API calls.
    - Total Error encountered via API calls.
    - Average response time.

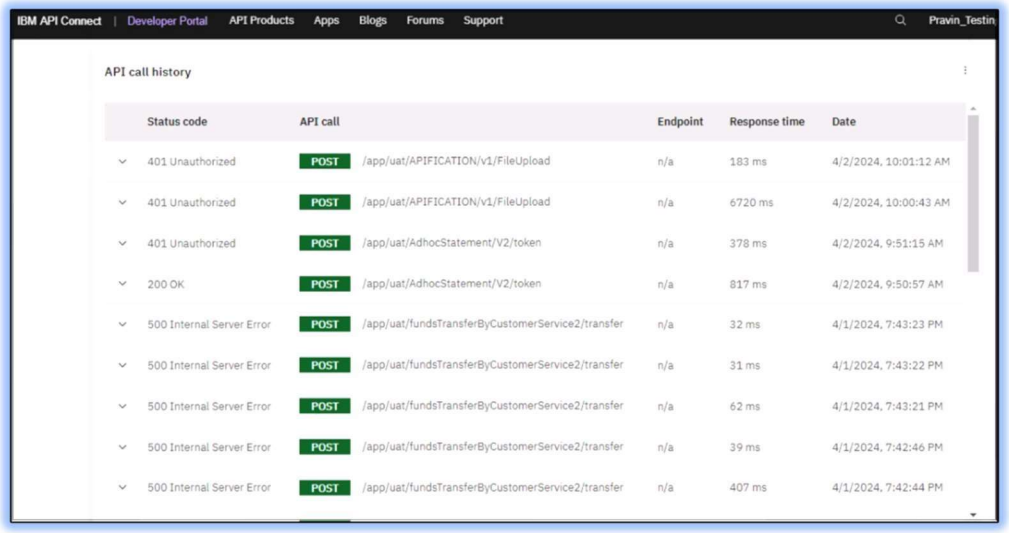

- Graph representation will also be displayed of API calls that were initiated.

- API call history will be displayed for better understanding and success and error details.

-END-
